The first column gives the ages on 31/3/1901 + the 2nd column gives the ages on 31/3/1911. The month of birth would be necessary to work out correctly the year of birth.

Mathematically ages should differ by 10 between 1901 and 1911 but most Irish people were illiterate + hence the variations. Older people tended to give their ages in excess of the real for 1911 because the Old Age Pension came in around 1906!
